Introduction

Definition 1. A Magma is a set G equipped with a binary operation $\circ: G \times G \to G$.

Equations

```
Definition 2 (Equation 1). Equation 1 is the law x = x.
Definition 3 (Equation 2). Equation 2 is the law x = y.
Definition 4 (Equation 3). Equation 3 is the law x = x \circ x.
Definition 5 (Equation 4). Equation 4 is the law x = x \circ y.
Definition 6 (Equation 5). Equation 5 is the law x = y \circ x.
Definition 7 (Equation 6). Equation 6 is the law x = y \circ y.
Definition 8 (Equation 7). Equation 7 is the law x = y \circ z.
Definition 9 (Equation 8). Equation 8 is the law x = x \circ (x \circ x).
Definition 10 (Equation 42). Equation 42 is the law x \circ y = x \circ z.
Definition 11 (Equation 43). Equation 43 is the law x \circ y = y \circ x.
Definition 12 (Equation 46). Equation 46 is the law x \circ y = z \circ w.
Definition 13 (Equation 387). Equation 387 is the law x \circ y = (y \circ y) \circ x.
Definition 14 (Equation 4512). Equation 4512 is the law x \circ (y \circ z) = (x \circ y) \circ z.
Definition 15 (Equation 4513). Equation 4513 is the law x \circ (y \circ z) = (x \circ y) \circ w.
Definition 16 (Equation 4552). Equation 4552 is the law x \circ (y \circ z) = (x \circ w) \circ u.
Definition 17 (Equation 4582). Equation 4582 is the law x \circ (y \circ z) = (w \circ u) \circ v.
```

Implications

To reduce clutter, trivial or very easy implications will not be displayed here.

Theorem 18 (387 implies 43). Definition ?? implies Definition ??.

Proof. (From MathOverflowhttps://mathoverflow.net/a/450905/766). By Definition $\ref{eq:mathoverflow}$, one has the law

$$(x \circ x) \circ y = y \circ x. \tag{3.1}$$

Specializing to $y = x \circ x$, we conclude

$$(x \circ x) \circ (x \circ x) = (x \circ x) \circ x$$

and hence by another application of (??) we see that $x \circ x$ is idempotent:

$$(x \circ x) \circ (x \circ x) = x \circ x. \tag{3.2}$$

Now, replacing x by $x \circ x$ in (??) and then using (??) we see that

$$(x \circ x) \circ y = y \circ (x \circ x)$$

so in particular $x \circ x$ commutes with $y \circ y$:

$$(x \circ x) \circ (y \circ y) = (y \circ y) \circ (x \circ x). \tag{3.3}$$

Also, from two applications of (??) one has

$$(x \circ x) \circ (y \circ y) = (y \circ y) \circ x = x \circ y.$$

Thus (??) simplifies to $x \circ y = y \circ x$, which is Definition ??.

Counterexamples
